

Secure2email Features and Benefits

Feature	Benefit
Encryption	
Encrypt the body content of an email	Protect an email during transit, on the desktop and in archive
Encrypt email attachments	In transit
Access Control	
Control access to an email	Using digital certificates, password, active directory and combinations of these methods
Control access using multiple factor authentication	Support for digital certificates that require a PIN
Assign different usage rights to different users	<i>e.g.</i> recipient A can access the email three times, whereas recipient B can only access the email once
Control After Access	
Prevent copying	Prevent a recipient from copying the content of your email – even using third party screen capture mechanisms
Prevent printing	Stop a recipient printing out your email
Number of times and email can be opened	Allows you to set how many times a recipient can open an email, after the maximum number has been reached the email will no longer be accessible by that recipient
No open in remote desktop	Prevents circumvention of copy prevention using a remote desktop access of an email
No open in virtual machine	Prevents the opening of a protected email on a virtual machine (or similar) to prevent circumvention of copy protection
Prevent access of an email before a certain date or after a certain date	Allows you to finely control when an email can be accessed (down to the minute) – for example, set an email so the recipient can only access it on the 23 rd January 2008 between 1-2pm
Other Benefits	
No license server to install and configure	Other email protection products require you to install and configure license servers to protect emails. Secure2email is a desktop install that takes seconds to install
No database of users to manage	Other email protection products require that users are co-opted into a database of users to use the system
Protected emails created in Outlook can be accessed on any other email client	Ensures that email recipients can receive protected emails on any email client (including web based email systems such as Gmail and Hotmail)
Free viewer for recipients of protected emails	http://www.avocosecure.com/downloads/viewers/secure2Eview.zip
