Hard Disk: 2 megabytes of free space
CPU Support: Single CPU systems
Processor: Pentium compatible - 133 MHz or higher

Language Support

English, other languages available on request: email sales@avocosecure.com

secure2sign:

- ✓ Does not use ActiveX controls, macros or Visual Basic code. The ability to sign without introducing active content:
 - ✓ Eliminates the possibility of active content being maliciously exploited.
 - ✓ Prevents the problem of firewalls filtering out documents with active content.
 - ✓ Avoids conflicts with using documents with active content in secure environments.
 - ✓ Ensures compatibility with Microsoft Office 2007 default native file formats (.docx) that specifically exclude any active elements (ActiveX, scripts or macros).
- ✓ Checks Microsoft Office documents for potentially malicious content before you sign, to ensure that you don't sign content that you are unaware of or that may display differently at a later date.
- ✓ Uses patent applied for techniques to prevent spoofing of the windows that display signature details. This prevents malicious programs from altering the display of signatures e.g. displaying an invalid signature as valid.
- ✓ Is resistant to the attacks that have been shown to affect other signing programs
